BEMER Physical Vascular Therapy

Dr. Kevin Shaw will discuss the research and science behind the positive effects of BEMER Physical Vascular Therapy on the pre-capillary and post-capillary circulation throughout the body, and how this improvement in circulation helps the body heal itself. In addition to the science, Dr. Shaw will share case studies from his clinic, some of which have been published. The human body contains more than 70,000 miles of microvessels. Learn how to assist the microvessels in improving your patients' health.

BEMER provides a non-invasive and non-habit forming alternative therapy to improve how your patient feels. BEMER is an FDA Registered Medical Device used in over 42 countries.

During this presentation Dr. Shaw will explain how BEMER can enhance:

- general blood flow,
- the body's nutrient and oxygen supply and waste disposal,
- cardiac function,
- physical fitness, endurance, strength and energy,
- concentration, mental acuity, stress reduction, and relaxation,
- sleep management
